

DISCHARGE SUMMARY
Mercy General Hospital System

PATIENT INFORMATION

Name: Maria Gonzalez
Date of Birth: 03/15/1989
Age: 37
Sex: Female
MRN: MGH-2026-44812
Admission Date: 07/28/2026
Discharge Date: 07/31/2026
Attending Physician: Dr. Samuel Whitfield, MD – General Surgery
Dictated: 07/31/2026

ADMITTING DIAGNOSIS

Acute appendicitis, uncomplicated

PRINCIPAL PROCEDURE

Laparoscopic appendectomy performed 07/28/2026 without complication.
Estimated blood loss: 25 mL. No drains placed. Operative time 42 minutes.

HOSPITAL COURSE

Ms. Gonzalez presented to the Emergency Department on 07/28/2026 with a 12-hour history of periumbilical pain migrating to the right lower quadrant, associated with nausea and one episode of emesis. Temperature on arrival was 100.4°F (38.0°C). CT abdomen/pelvis demonstrated a dilated appendix measuring 11 mm with periappendiceal fat stranding, consistent with acute appendicitis. White blood cell count was 13,200/μL.

The patient was taken to the operating room the same day for laparoscopic appendectomy. The procedure was uncomplicated. Pathology confirmed acute suppurative appendicitis without perforation.

Postoperatively, the patient recovered well. She tolerated a regular diet on postoperative day 1, ambulated independently, and had adequate pain control with oral analgesics. Vital signs remained stable throughout admission:

- Blood pressure: 118/72 mmHg
- Heart rate: 76 bpm
- Respiratory rate: 16 breaths/min
- Temperature: 98.6°F (37.0°C) on day of discharge
- Oxygen saturation: 99% on room air

DISCHARGE DIAGNOSES

1. Acute suppurative appendicitis, status post laparoscopic appendectomy
2. Postoperative pain, controlled

DISCHARGE MEDICATIONS

1. Ibuprofen 400 mg PO every 6 hours as needed for pain × 7 days
2. Acetaminophen 500 mg PO every 6 hours as needed (alternating with ibuprofen) × 7 days

Date/Time: 07/31/2026 14:22 EST
